

SOIL Media Coverage

A selection of recent media coverage of SOIL's work in Haiti includes the following:

> **BBC World Hack: Toilets in Haiti**, March 28, 2017

"There are no sewers in Haiti. 26% of Haitians have access to a toilet, so a lot of the sewage ends up in the water supply. Currently, Haiti is battling the biggest cholera epidemic in recent history and thousands are dying. We travel there to meet a team of women who are trying to solve this massive problem."

> **AJ+: Turning Poop into Fertilizer in Haiti**, February 26, 2017

"Haiti is fighting cholera by turning human poop into rich fertilizer."

> **Ashoka: Transforming Wastes into Resources in Haiti**, July 11, 2016

"In Haiti over 99% of human waste goes untreated with devastating consequences for both the environment and public health."

> **Le Nouvelliste** [Haiti's primary national publication]: **Des toilettes aux assiettes: Et si nous passions à des solutions alternatives pour l'assainissement?**, Jun 28, 2016

"Of course, the acceptance and use of ecological toilets calls for a paradigm shift, an eco-citizen commitment. But in the current context Haiti's degraded environment, it is no longer necessary to demonstrate that this paradigm shift is more than necessary. ... And I also argue that with SOIL's EcoSan toilets, we can allow people in places where it is difficult to otherwise access sanitation to have a service that enhances their dignity and gives them the opportunity to produce compost. So, I invite you to help close the cycle and make a healthy, ecological and sustainable link between our toilets and our plates! Defecate, compost, produce, and of course, eat!" (Translated from the original French.)
